HAYES, JOHN W

ART UNIT PAPER NUMBER

3621

DATE MAILED: 04/07/2004

Please find below and/or attached an Office communication concerning this application or proceeding.

Office Action Summary

Application No.

09/690,601

Applicant(s)

MAMDANI ET AL.

Examiner

John W Hayes

Art Unit

3621

-- The MAILING DATE of this communication appears on the cover sheet with the correspondence address --

Period for Reply

A SHORTENED STATUTORY PERIOD FOR REPLY IS SET TO EXPIRE 3 MONTH(S) FROM THE MAILING DATE OF THIS COMMUNICATION.

- Extensions of time may be available under the provisions of 37 CFR 1.136(a). In no event, however, may a reply be timely filed after SIX (6) MONTHS from the mailing date of this communication.
- If the period for reply specified above is less than thirty (30) days, a reply within the statutory minimum of thirty (30) days will be considered timely.
- If NO period for reply is specified above, the maximum statutory period will apply and will expire SIX (6) MONTHS from the mailing date of this communication.
- Failure to reply within the set or extended period for reply will, by statute, cause the application to become ABANDONED (35 U.S.C. § 133). Any reply received by the Office later than three months after the mailing date of this communication, even if timely filed, may reduce any earned patent term adjustment. See 37 CFR 1.704(b).

Status

- 1) ☒ Responsive to communication(s) filed on 09 January 2004.
- 2a) ☒ This action is **FINAL**. 2b) ☐ This action is non-final.
- 3) ☐ Since this application is in condition for allowance except for formal matters, prosecution as to the merits is closed in accordance with the practice under *Ex parte Quayle*, 1935 C.D. 11, 453 O.G. 213.

Disposition of Claims

- 4) ☒ Claim(s) 1-22 and 24-38 is/are pending in the application.
- 4a) Of the above claim(s) _____ is/are withdrawn from consideration.
- 5) ☐ Claim(s) _____ is/are allowed.
- 6) ☒ Claim(s) 1-22 and 24-38 is/are rejected.
- 7) ☐ Claim(s) _____ is/are objected to.
- 8) ☐ Claim(s) _____ are subject to restriction and/or election requirement.

Application Papers

- 9) ☐ The specification is objected to by the Examiner.
- 10) ☒ The drawing(s) filed on 17 October 2000 is/are: a) ☒ accepted or b) ☐ objected to by the Examiner.
Applicant may not request that any objection to the drawing(s) be held in abeyance. See 37 CFR 1.85(a).
Replacement drawing sheet(s) including the correction is required if the drawing(s) is objected to. See 37 CFR 1.121(d).
- 11) ☐ The oath or declaration is objected to by the Examiner. Note the attached Office Action or form PTO-152.

Priority under 35 U.S.C. § 119

- 12) ☐ Acknowledgment is made of a claim for foreign priority under 35 U.S.C. § 119(a)-(d) or (f).
- a) ☐ All b) ☐ Some * c) ☐ None of:
- ☐ Certified copies of the priority documents have been received.
 - ☐ Certified copies of the priority documents have been received in Application No. _____.
 - ☐ Copies of the certified copies of the priority documents have been received in this National Stage application from the International Bureau (PCT Rule 17.2(a)).

* See the attached detailed Office action for a list of the certified copies not received.

Attachment(s)

- ☒ Notice of References Cited (PTO-892)

- ☐ Other: _____

DETAILED ACTION

Status of Claims

1. Applicant has amended claims 1, 21-22, 37-38 and canceled claim 23 in the amendment filed 09 January 2004. Thus, claims 1-22 and 24-38 remain pending and are presented for examination.

Response to Arguments

2. Applicant's arguments filed 09 January 2004 have been fully considered but are not persuasive.
3. Applicant asserts that for a U.S. application publication to be given an earlier effective filing date, the subject matter must be supported in the earlier filed application's disclosure. Applicant argues that while the Melick publication in Figure 1 describes a "stand alone" bar code reader, there is no teaching or suggesting of using the stand alone bar code reader to read a transaction code from a display of a wireless device. Applicant further argues that this material is clearly absent from the two earliest provisional applications. Examiner respectfully disagrees and submits that Melick first discloses that the devices displaying the bar code can be wireless devices such as a cell phone, PDA, GPS receiver, pager, or a 2-way communications device (0040; 0064; 0065) and scanning displayed bar codes on these devices using the bar code reader (0006; 0007; 0014; 0027; 0049; 0071). Melick also discloses that the bar code reader can either be integrated into the device displaying the bar code (0040) or be a separate, stand alone device (0038; 0066). Applicant further asserts that Melick proposes using wireless devices to provide mobility to the scanner, not mobility to a wireless device displaying a transaction code. Examiner respectfully disagrees and submits that Melick specifically discloses that a PDA device (which is a wireless device) can be used to display an electronic bar code (0049) and further capturing this video displayed bar code with a stand alone bar code reader (shown in Figure 1)(0049).
4. Examiner further submits that provisional application 60/174,220 provides support by teaching the use of a computer or PDA device for displaying a video displayed bar code (Page 4, 4th paragraph) and scanning a bar code displayed on the device with a bar code reader (Page 5, 1st paragraph). Provisional application 60/174,220 also teaches that the bar code reader may be a separately situated bar code

Art Unit: 3621

reader device (page 3, second paragraph). A copy of provisional application 60/174,220 is provided herewith.

5. Applicant further asserts that the subject claims, in light of the present amendment, are patentable distinct from the cited claims of co-pending application no. 09/690,212 and requests withdrawal of the double patenting rejection. Examiner has updated the double patenting rejection below based upon the present amendment.

Claim Rejections - 35 USC § 102

6. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(e) the invention was described in (1) an application for patent, published under section 122(b), by another filed in the United States before the invention by the applicant for patent or (2) a patent granted on an application for patent by another filed in the United States before the invention by the applicant for patent, except that an international application filed under the treaty defined in section 351(a) shall have the effects for purposes of this subsection of an application filed in the United States only if the international application designated the United States and was published under Article 21(2) of such treaty in the English language.

7. Claims 1-6, 10-21, 23-28 and 33-38 are rejected under 35 U.S.C. 102(e) as being anticipated by Melick et al, U.S. Patent Application Publication No. US 2002/0195495 A1.

As per **Claims 1-2, 4, 11-12, 23 and 37**, Melick et al disclose a method and system for facilitating a wireless transaction comprising a transaction fulfillment system for:

- communicating a first transaction code to a wireless communication device from a transaction fulfillment system (Figure 5; 0024; 0025; 0027; 0028; 0040; 0045; 0053; 0064; 0065; 0072);
- optically scanning, by a transaction fulfillment system detached from and not integrated with the wireless communication device, the first transaction code from a visual display of the wireless communication device (0027; 0028; 0038; 0049; 0053; 0064; 0066; 0072).

Art Unit: 3621

As per **Claims 3 and 13-14**, Melick et al further disclose communicating the first transaction code from a radio transceiver of the transaction fulfillment system to a radio transceiver of the wireless communication device (0027; 0040; 0042; 0043).

As per **Claim 5**, Melick et al further disclose verifying the first transaction code in response to scanning the first transaction code (0027).

As per **Claims 6 and 10**, Melick et al further disclose communicating a decoded representation of the first transaction code from the transaction fulfillment system to a transaction management system (0027; 0028; 0053; 0072).

As per **Claims 16-18**, Melick et al further disclose communicating a message from the transaction fulfillment system to the wireless communication device after verifying the transaction code (0053; 0072).

As per **Claim 19**, Melick et al further disclose receiving, by the transaction fulfillment system, a transaction request from the wireless communication device prior to communicating the first transaction code (0028; 0053; 0072).

As per **Claims 15 and 20**, Melick et al further disclose wherein communicating the first transaction code includes communicating a first optically scannable transaction code (0028; 0053; 0072).

As per **Claims 21 and 38**, Melick et al disclose a method and system for facilitating a wireless transaction comprising a transaction fulfillment system for:

- receiving a transaction request from a wireless communication device (0053; 0072);
- optically scanning, by a transaction fulfillment system detached from and not integrated with the wireless communication device, a transaction code from a visual display of the wireless communication device (0027; 0028; 0038; 0049; 0053; 0064; 0066; 0072); and

Art Unit: 3621

- enabling fulfillment of the transaction request in response to scanning the transaction code (0053; 0072).

As per Claims 24-25, Melick et al further disclose wherein the transaction fulfillment system is coupled to a telecommunication network system through a computer network system for enabling communication with the wireless communication device (Figure 5).

As per Claims 26-28 and 36, Melick et al further disclose wherein the transaction fulfillment system is coupled to a wireless data network system through a computer network system for enabling communication with the wireless communication device (Figure 5; 0027; 0040; 0066; 0067; 0068).

As per Claims 33-34, Melick et al further disclose a code scanning device such as a bar code reader for optically scanning the transaction code (Figure 5).

As per Claim 35, Melick et al further disclose decoding the transaction code in response to optically scanning the transaction code (0027; 0028; 0053; 0072).

Claim Rejections - 35 USC § 103

8. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

9. Claims 7-9, 22 and 29-32 are rejected under 35 U.S.C. 103(a) as being unpatentable over Melick et al, U.S. Patent Application Publication No. US 2002/0195495 A1 in view of Pitroda, U.S. Patent No. 5,590,038.

Art Unit: 3621

As per Claims 7-9, Melick et al fail to explicitly disclose communicating a first or second fulfillment verification to the transaction management system or communicating a second transaction code to the wireless communication device. Examiner submits that communicating verification messages and multiple transaction codes in a transaction system would have been obvious to one having ordinary skill in the art at the time of applicants claimed invention. It also would have been obvious to one having ordinary skill in the art to communicate multiple transaction codes and multiple verification messages in any transaction system since it has been held that mere duplication of the essential working parts of a device or duplication of steps involves only routine skill in the art. See *St. Regis Paper Co. v. Bemis Co.*, 193 USPQ 8.

As per Claims 22 and 29-32, Melick et al disclose a method for facilitating a wireless transaction comprising:

- receiving, by a transaction fulfillment system, a transaction request from a transaction requester (0053; 0072);
- communicating a transaction code from the transaction fulfillment system to a wireless communication device (Figure 5; 0024; 0025; 0027; 0028; 0040; 0045; 0053; 0064; 0065; 0072);
- optically scanning, by the transaction fulfillment system, the transaction code from a visual display of the wireless communication device, the transaction fulfillment system being detached from and not integrated with the wireless communication device (0027; 0028; 0038; 0049; 0053; 0064; 0066; 0072).

Melick et al, however, fail to explicitly disclose verifying the identity of the transaction requestor through the use of a speech services module for audibly verifying the identity of the requestor by comparing voice prints. Examiner takes Official Notice that verifying the identity of a transaction requestor is notoriously well known in the business art. For example, Pitroda discloses an electronic transaction system and method for conducting electronic transactions and teaches a method for verifying the identity of a transaction requestor by displaying signatures of use of other types of identification such as photographs, finger prints or voice prints (Col. 12, lines 54-58). It would have been obvious to one of

Art Unit: 3621

ordinary skill in the art at the time of applicant's invention to modify the method of Melick et al and verify the identity of the transaction requestor for obvious reasons such as ensuring that the requestor is actually the person they say they are and are authorized to carry out the transaction.

Double Patenting

10. The nonstatutory double patenting rejection is based on a judicially created doctrine grounded in public policy (a policy reflected in the statute) so as to prevent the unjustified or improper timewise extension of the "right to exclude" granted by a patent and to prevent possible harassment by multiple assignees. See *In re Goodman*, 11 F.3d 1046, 29 USPQ2d 2010 (Fed. Cir. 1993); *In re Longi*, 759 F.2d 887, 225 USPQ 645 (Fed. Cir. 1985); *In re Van Ornum*, 686 F.2d 937, 214 USPQ 761 (CCPA 1982); *In re Vogel*, 422 F.2d 438, 164 USPQ 619 (CCPA 1970); and, *In re Thorington*, 418 F.2d 528, 163 USPQ 644 (CCPA 1969).

A timely filed terminal disclaimer in compliance with 37 CFR 1.321(c) may be used to overcome an actual or provisional rejection based on a nonstatutory double patenting ground provided the conflicting application or patent is shown to be commonly owned with this application. See 37 CFR 1.130(b).

Effective January 1, 1994, a registered attorney or agent of record may sign a terminal disclaimer. A terminal disclaimer signed by the assignee must fully comply with 37 CFR 3.73(b).

11. Claims 1-20 are provisionally rejected under the judicially created doctrine of obviousness-type double patenting as being unpatentable over claims 1-2, 4, 11, 16-17, 20, 23-24, 27 and 30-31 of copending Application No. 09/690,212 and further in view of Melick et al, U.S. Patent Application Publication No. 2002/0195495 A1. Although the conflicting claims are not identical, they are not patentably distinct from each other. Claim 1 of U.S. Patent Application No. 09/690,212 recites:

- communicating a first transaction code to a wireless communication device; and
- optically scanning the first transaction code from the visual display of the wireless communication device

Claim 1 of U.S. Patent Application No. 09/690,212 differs since it further recites additional claim limitations including receiving a transaction request from a transaction requester, verifying an identity of the transaction requester and receiving a decoded representation of the first transaction code. However, it would have been obvious to a person of ordinary skill in the art to modify claim 1 of U.S. Patent Application No. 09/690,212 by removing the limitations directed to these additional steps resulting generally in the claims of the present application since the claims of the present application and the claim

Art Unit: 3621

recited in U.S. Patent Application No. 09/690,212 actually perform a similar function. It is well settled that the omission of an element and its function is an obvious expedient if the remaining elements perform the same function as before. *In re Karlson*, 136 USPQ 184 (CCPA 1963). Also note *Ex parte Rainu*, 168 USPQ 375 (Bd. App. 1969). Omission of a reference element whose function is not needed would be obvious to one of ordinary skill in the art.

Claim 1 of U.S. Patent Application No. 09/690,212 further fails to recite that the scanning device is detached from and not integrated with the wireless communication device. Melick discloses scanning a transaction code from the display of a wireless communication device using a stand alone bar code scanner that is not integrated with the wireless communication device (0027; 0028; 0038; 0049; 0053; 0064; 0066; 0072). Thus, it would have been obvious to one having ordinary skill in the art to modify claim 1 of U.S. Patent Application No. 09/690,212 and allow for scanning of the transaction code using a separately situated bar code scanner that is not integrated with the wireless communication device as taught by Melick. The motivation would be to provide flexibility in the configuration to allow for different methods of using the bar code scanner as suggested by Melick.

This is a provisional obviousness-type double patenting rejection because the conflicting claims have not in fact been patented.

12. Claims 21 and 38 are provisionally rejected under the judicially created doctrine of obviousness-type double patenting as being unpatentable over claim 1 of copending Application No. 09/690,212 in view of Melick, U.S. Patent Application Publication No. US 2002/0195495 A1.

Claim 1 of U.S. Patent Application No. 09/690,212 recites:

- receiving a transaction request from a transaction requestor;
- optically scanning a transaction code from a visual display of the wireless communication device

Claim 1 of U.S. Patent Application No. 09/690,212 fails to recite wherein the transaction request is received from a wireless communication device, scanning the code by a transaction fulfillment system and enabling fulfillment of the transaction request in response to scanning the transaction code. Melick et

Art Unit: 3621

al disclose a method and system for bar code exchange and further teach the use of wireless communication devices for requesting transactions that are fulfilled through a transaction fulfillment system in response to scanning the transaction code (0024, 0025, 0027, 0040, 0053, 0064, 0072). It would have been obvious to one of ordinary skill in the art at the time of applicant's invention to modify claim 1 of U.S. Patent Application No. 09/690,212 and actually enable fulfillment of the transaction request by a fulfillment system in order to actually carry out the transaction as well as provide flexibility and convenience to users who would prefer to use wireless communication devices to carry out transactions.

Claim 1 of U.S. Patent Application No. 09/690,212 also differs since it further recites additional claim limitations including receiving a transaction request from a transaction requester, verifying an identity of the transaction requester and receiving a decoded representation of the first transaction code. However, it would have been obvious to a person of ordinary skill in the art to modify claim 1 of U.S. Patent Application No. 09/690,212 by removing the limitations directed to these additional steps resulting generally in the claims of the present application since the claims of the present application and the claim recited in U.S. Patent Application No. 09/690,212 actually perform a similar function. It is well settled that the omission of an element and its function is an obvious expedient if the remaining elements perform the same function as before. *In re Karlson*, 136 USPQ 184 (CCPA 1963). Also note *Ex parte Rainu*, 168 USPQ 375 (Bd. App. 1969). Omission of a reference element whose function is not needed would be obvious to one of ordinary skill in the art.

Claim 1 of U.S. Patent Application No. 09/690,212 further fails to recite that the scanning device is detached from and not integrated with the wireless communication device. Melick discloses scanning a transaction code from the display of a wireless communication device using a stand alone bar code scanner that is not integrated with the wireless communication device (0027; 0028; 0038; 0049; 0053; 0064; 0066; 0072). Thus, it would have been obvious to one having ordinary skill in the art to modify claim 1 of U.S. Patent Application No. 09/690,212 and allow for scanning of the transaction code using a separately situated bar code scanner that is not integrated with the wireless communication device as

Art Unit: 3621

taught by Melick. The motivation would be to provide flexibility in the configuration to allow for different methods of using the bar code scanner as suggested by Melick.

This is a provisional obviousness-type double patenting rejection.

13. Claim 22 is provisionally rejected under the judicially created doctrine of obviousness-type double patenting as being unpatentable over claim 1 of copending Application No. 09/690,212 in view of Melick, U.S. Patent Application Publication No. US 2002/0195495 A1.

Although the conflicting claims are not identical, they are not patentably distinct from each other.

Claim 1 of U.S. Patent Application No. 09/690,212 recites:

- receiving a transaction request from a transaction requestor;
- verifying an identity of the transaction requestor;
- communicating a transaction code to a wireless communication device
- optically scanning a transaction code from a visual display of the wireless communication device

Claim 1 of U.S. Patent Application No. 09/690,212 also differs since it further recites additional claim limitations including receiving a decoded representation of the first transaction code. However, it would have been obvious to a person of ordinary skill in the art to modify claim 1 of U.S. Patent Application No. 09/690,212 by removing the limitations directed to these additional steps resulting generally in the claims of the present application since the claims of the present application and the claim recited in U.S. Patent Application No. 09/690,212 actually perform a similar function. It is well settled that the omission of an element and its function is an obvious expedient if the remaining elements perform the same function as before. *In re Karlson*, 136 USPQ 184 (CCPA 1963). Also note *Ex parte Rainu*, 168 USPQ 375 (Bd. App. 1969). Omission of a reference element whose function is not needed would be obvious to one of ordinary skill in the art.

Claim 1 of U.S. Patent Application No. 09/690,212 further fails to recite that the scanning device is detached from and not integrated with the wireless communication device. Melick discloses scanning a transaction code from the display of a wireless communication device using a stand alone bar code

Art Unit: 3621

scanner that is not integrated with the wireless communication device (0027; 0028; 0038; 0049; 0053; 0064; 0066; 0072). Thus, it would have been obvious to one having ordinary skill in the art to modify claim 1 of U.S. Patent Application No. 09/690,212 and allow for scanning of the transaction code using a separately situated bar code scanner that is not integrated with the wireless communication device as taught by Melick. The motivation would be to provide flexibility in the configuration to allow for different methods of using the bar code scanner as suggested by Melick.

This is a provisional obviousness-type double patenting rejection.

14. Claims 23-37 are provisionally rejected under the judicially created doctrine of obviousness-type double patenting as being unpatentable over claims 1 and 32-44 of copending Application No. 09/690,212 in view of Melick, U.S. Patent Application Publication No. US 2002/0195495 A1.

Although the conflicting claims are not identical, they are not patentably distinct from each other.

Claim 1 of U.S. Patent Application No. 09/690,212 recites:

- communicating a first transaction code to a wireless communication device; and
- optically scanning the first transaction code from the visual display of the wireless communication device

Claim 1 of U.S. Patent Application No. 09/690,212 differs since it further recites additional claim limitations including receiving a transaction request from a transaction requester, verifying an identity of the transaction requester and receiving a decoded representation of the first transaction code. However, it would have been obvious to a person of ordinary skill in the art to modify claim 1 of U.S. Patent Application No. 09/690,212 by removing the limitations directed to these additional steps resulting generally in the claims of the present application since the claims of the present application and the claim recited in U.S. Patent Application No. 09/690,212 actually perform a similar function. It is well settled that the omission of an element and its function is an obvious expedient if the remaining elements perform the same function as before. *In re Karlson*, 136 USPQ 184 (CCPA 1963). Also note *Ex parte Rainu*, 168 USPQ 375 (Bd. App. 1969). Omission of a reference element whose function is not needed would be obvious to one of ordinary skill in the art.

Art Unit: 3621

Claim 1 of U.S. Patent Application No. 09/690,212 further fails to recite that the scanning device is detached from and not integrated with the wireless communication device. Melick discloses scanning a transaction code from the display of a wireless communication device using a stand alone bar code scanner that is not integrated with the wireless communication device (0027; 0028; 0038; 0049; 0053; 0064; 0066; 0072). Thus, it would have been obvious to one having ordinary skill in the art to modify claim 1 of U.S. Patent Application No. 09/690,212 and allow for scanning of the transaction code using a separately situated bar code scanner that is not integrated with the wireless communication device as taught by Melick. The motivation would be to provide flexibility in the configuration to allow for different methods of using the bar code scanner as suggested by Melick.

This is a provisional obviousness-type double patenting rejection because the conflicting claims have not in fact been patented.

Conclusion

15. Applicant's amendment necessitated the new ground(s) of rejection presented in this Office action. Accordingly, **THIS ACTION IS MADE FINAL**. See MPEP § 706.07(a). Applicant is reminded of the extension of time policy as set forth in 37 CFR 1.136(a).

A shortened statutory period for reply to this final action is set to expire THREE MONTHS from the mailing date of this action. In the event a first reply is filed within TWO MONTHS of the mailing date of this final action and the advisory action is not mailed until after the end of the THREE-MONTH shortened statutory period, then the shortened statutory period will expire on the date the advisory action is mailed, and any extension fee pursuant to 37 CFR 1.136(a) will be calculated from the mailing date of the advisory action. In no event, however, will the statutory period for reply expire later than SIX MONTHS from the date of this final action.

16. **Examiner's Note:** Examiner has cited particular columns and line numbers in the references as applied to the claims below for the convenience of the applicant. Although the specified citations are representative of the teachings in the art and are applied to the specific limitations within the individual

Art Unit: 3621

claim, other passages and figures may apply as well. It is respectfully requested from the applicant, in preparing the responses, to fully consider the references in entirety as potentially teaching all or part of the claimed invention.

17. The prior art made of record and not relied upon is considered pertinent to applicant's disclosure.

- Ramachandran [6,315,195 discloses a transaction apparatus and teach displaying a bar code on a wireless communication device used to facilitate the processing of a transaction.

Art Unit: 3621

18. Any inquiry concerning this communication or earlier communications from the examiner should be directed to John Hayes whose telephone number is (703)306-5447. The examiner can normally be reached Monday through Friday from 5:30 to 3:00.

If attempts to reach the examiner by telephone are unsuccessful, the examiner's supervisor, Jim Trammell, can be reached on (703) 305-9768.
